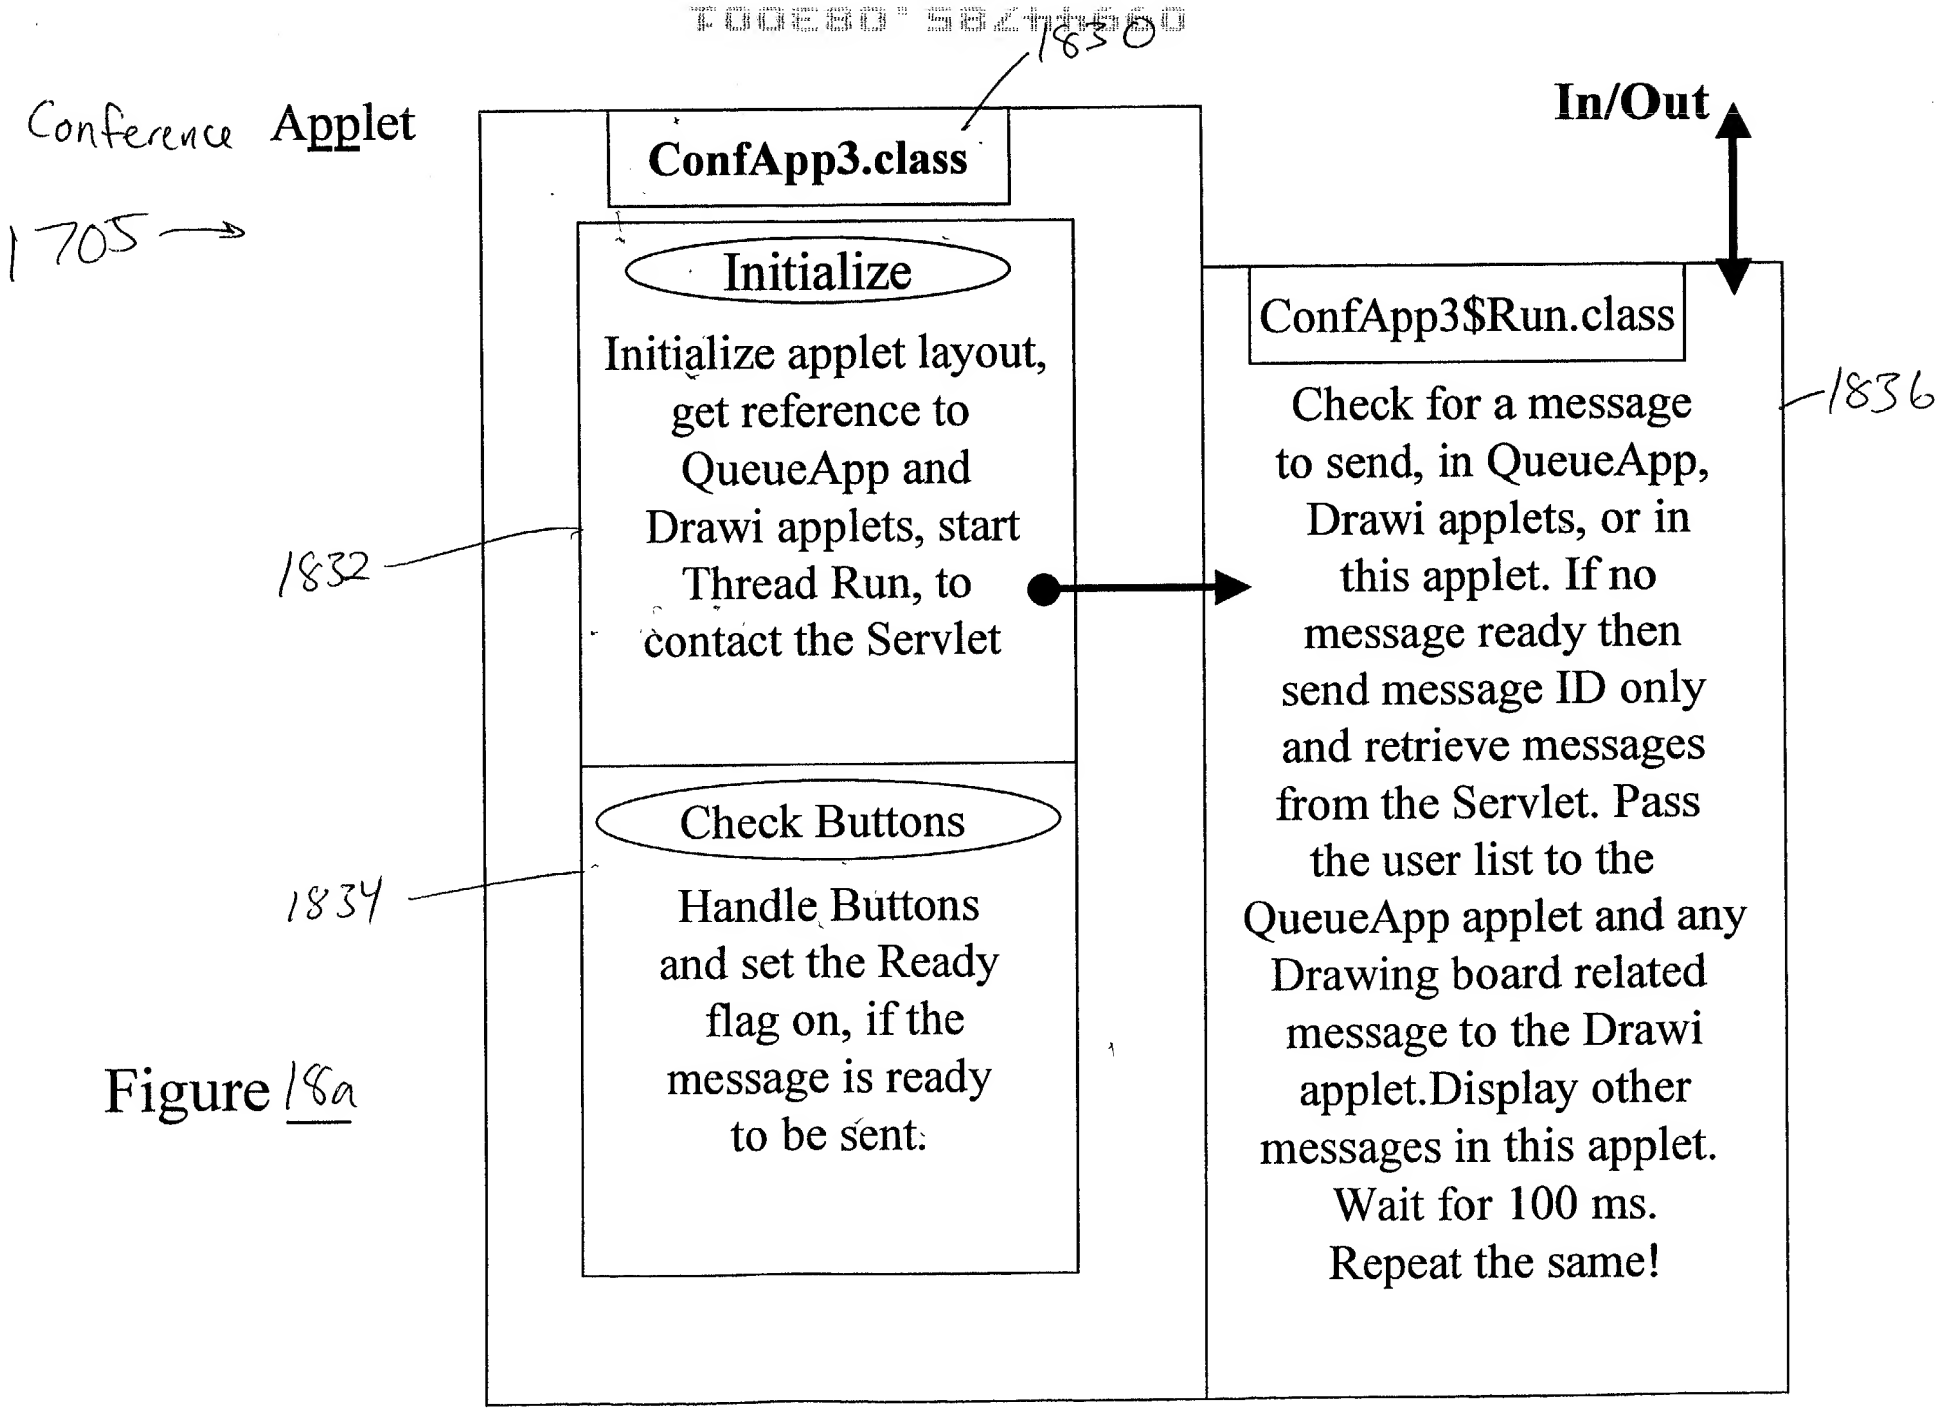
Figure 17c



Conference Applet
1705
1830
ConfApp3.class
In/Out
Initialize
Initialize applet layout, get reference to QueueApp and Drawi applets, start Thread Run, to contact the Servlet
1832
Check Buttons
Handle Buttons and set the Ready flag on, if the message is ready to be sent.
1834
ConfApp3$Run.class
Check for a message to send, in QueueApp, Drawi applets, or in this applet. If no message ready then send message ID only and retrieve messages from the Servlet. Pass the user list to the QueueApp applet and any Drawing board related message to the Drawi applet.Display other messages in this applet. Wait for 100 ms. Repeat the same!
1836

Figure 18a

Queue Applet

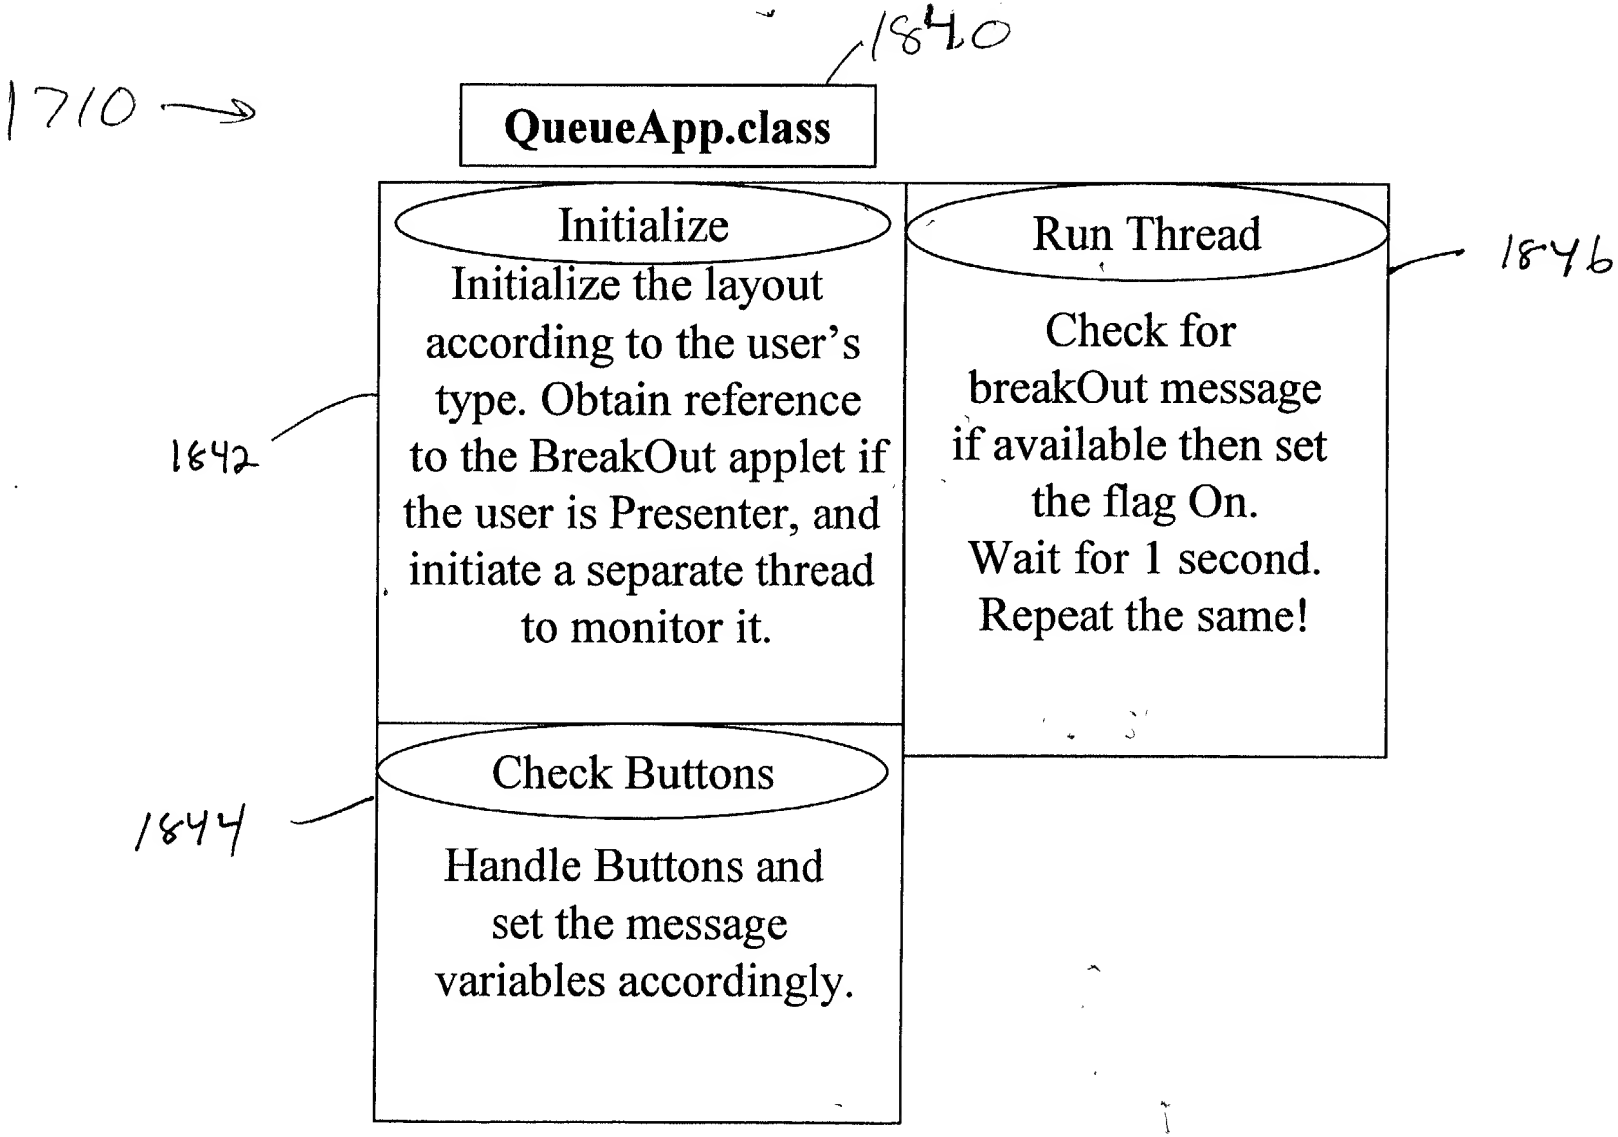


Figure 18b

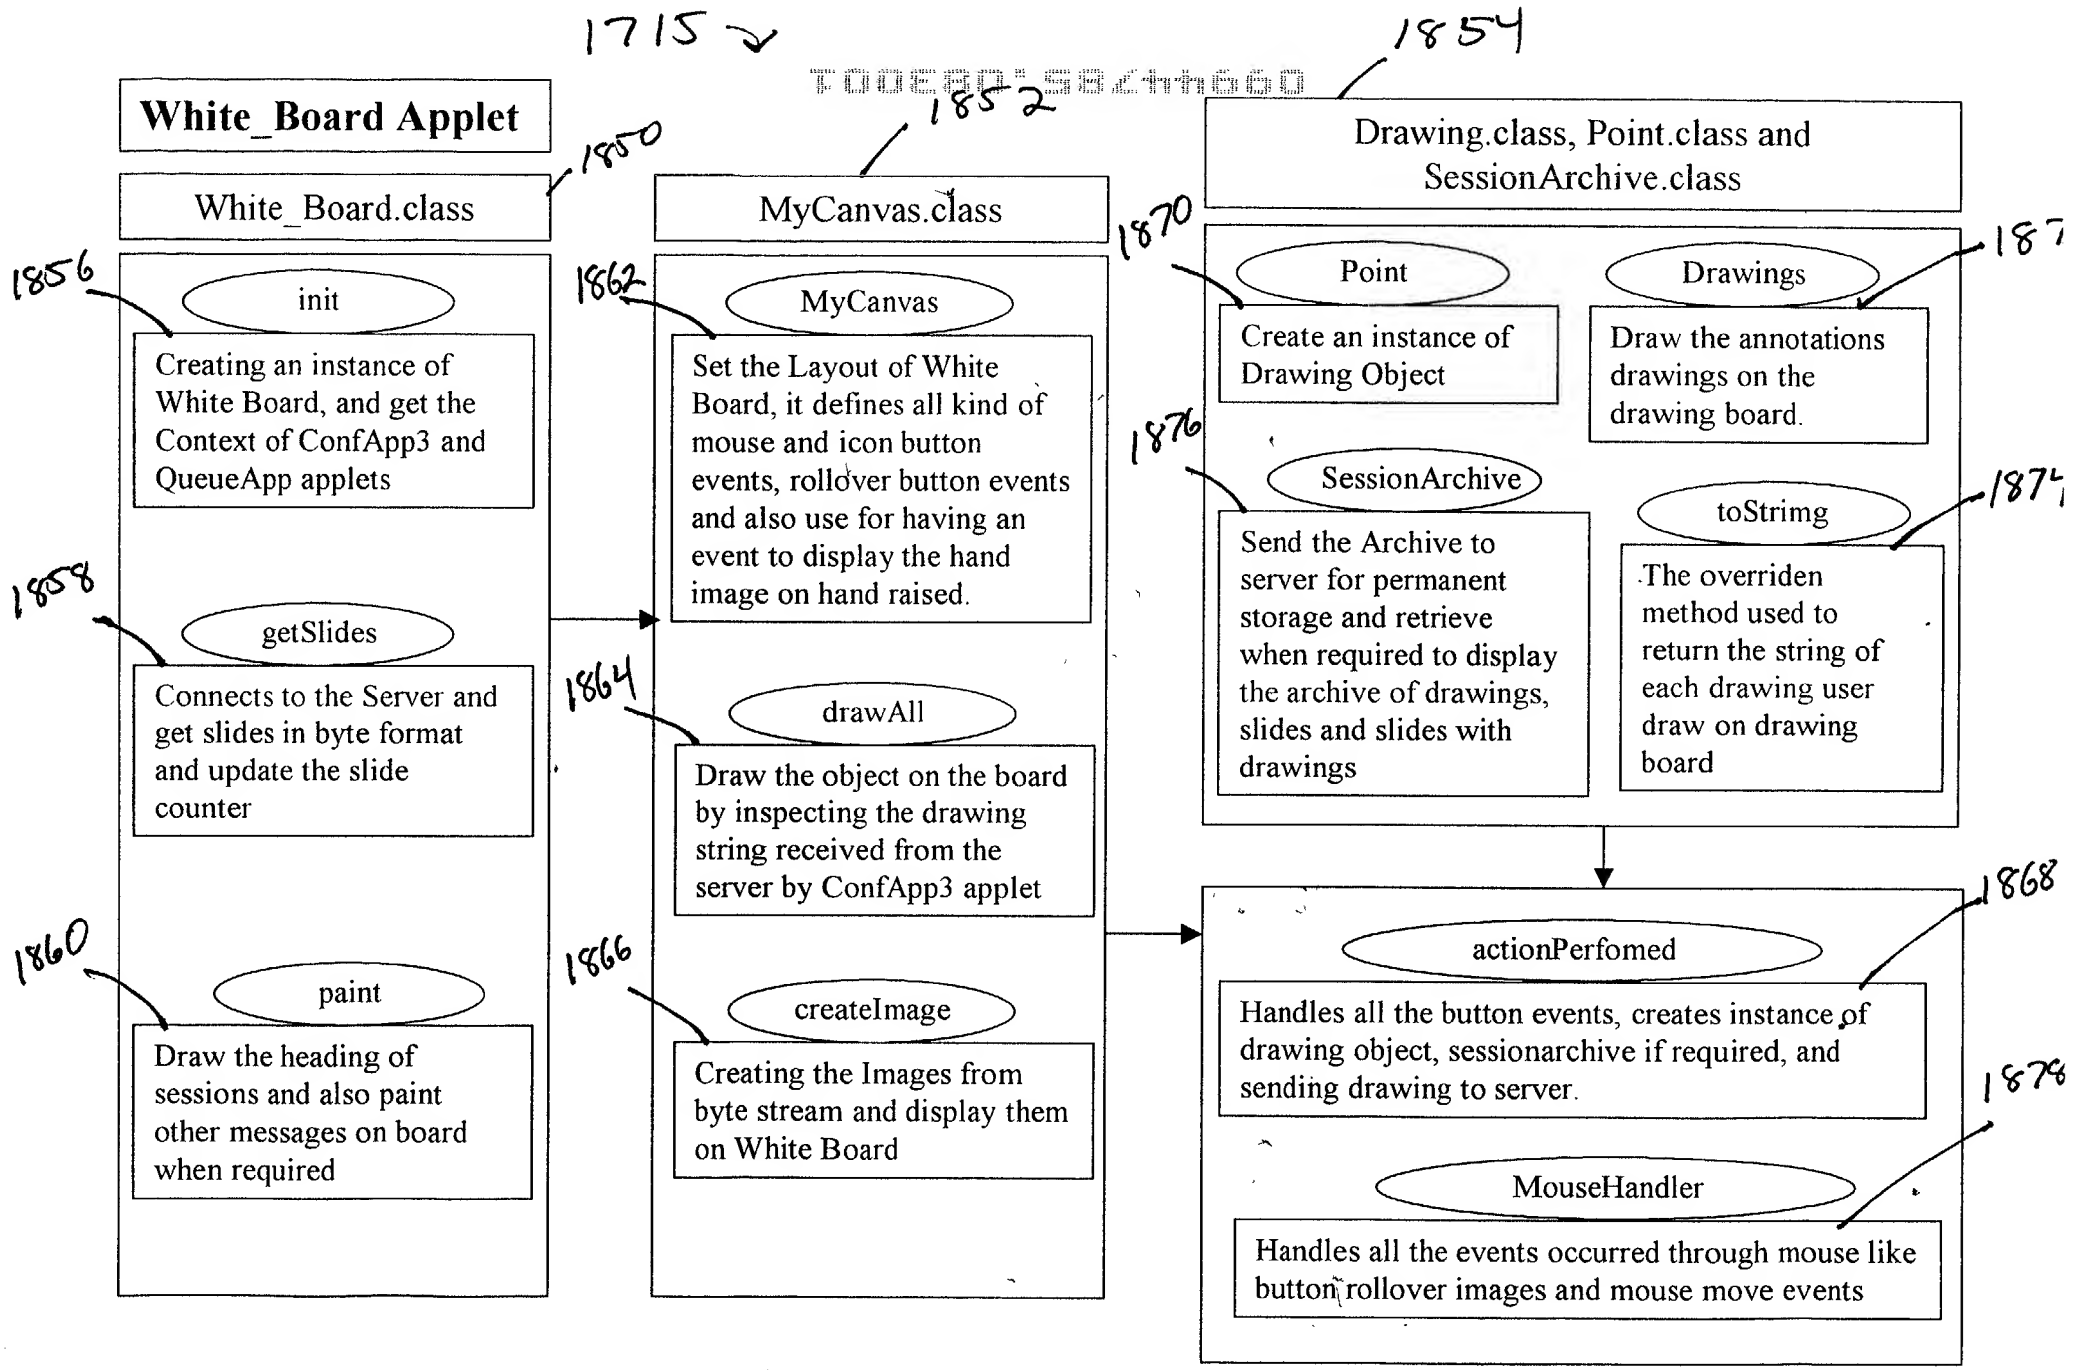
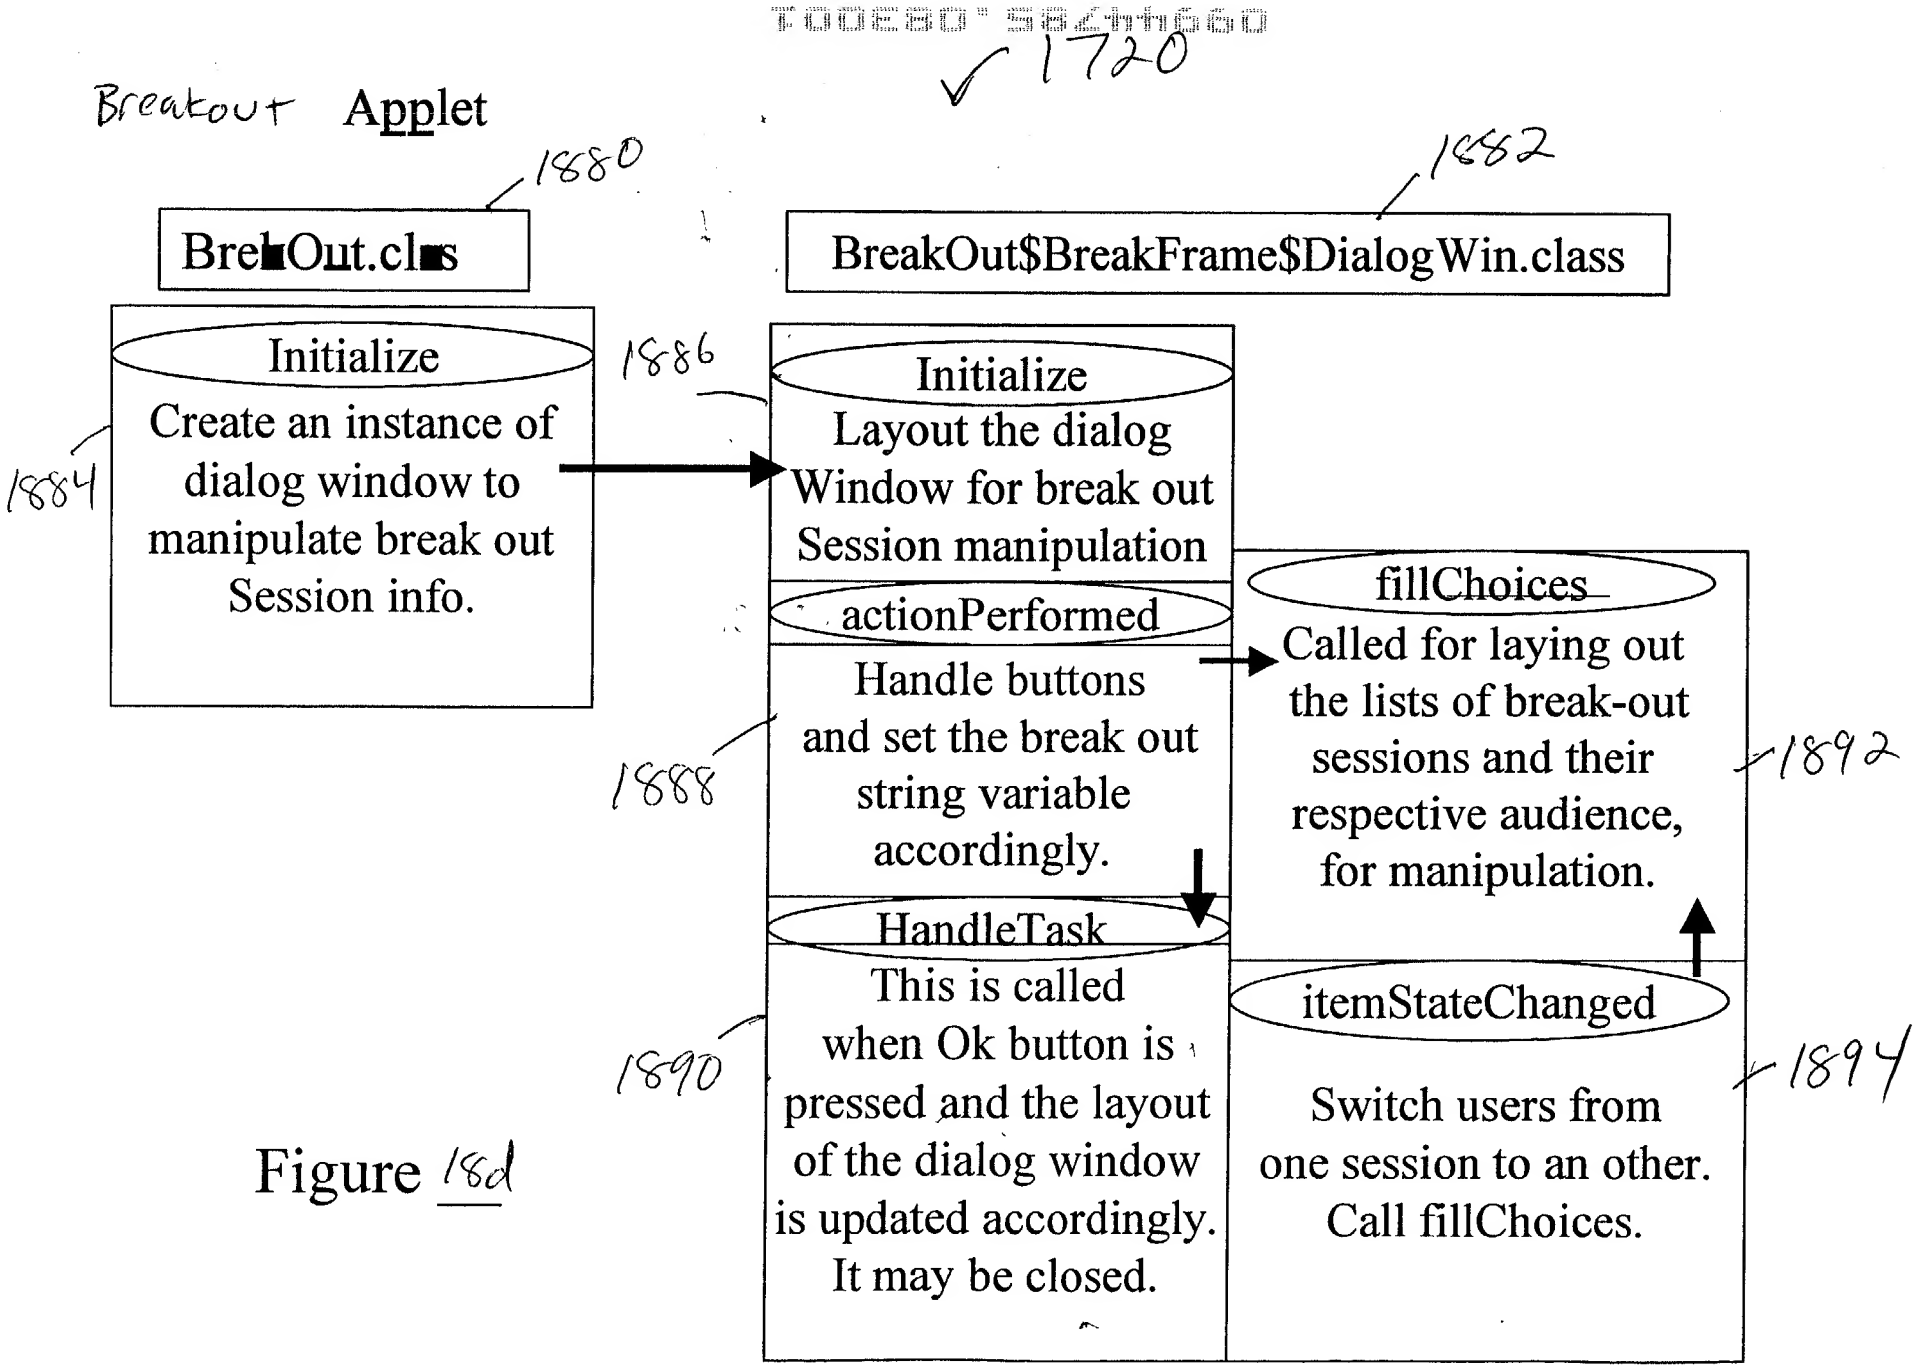


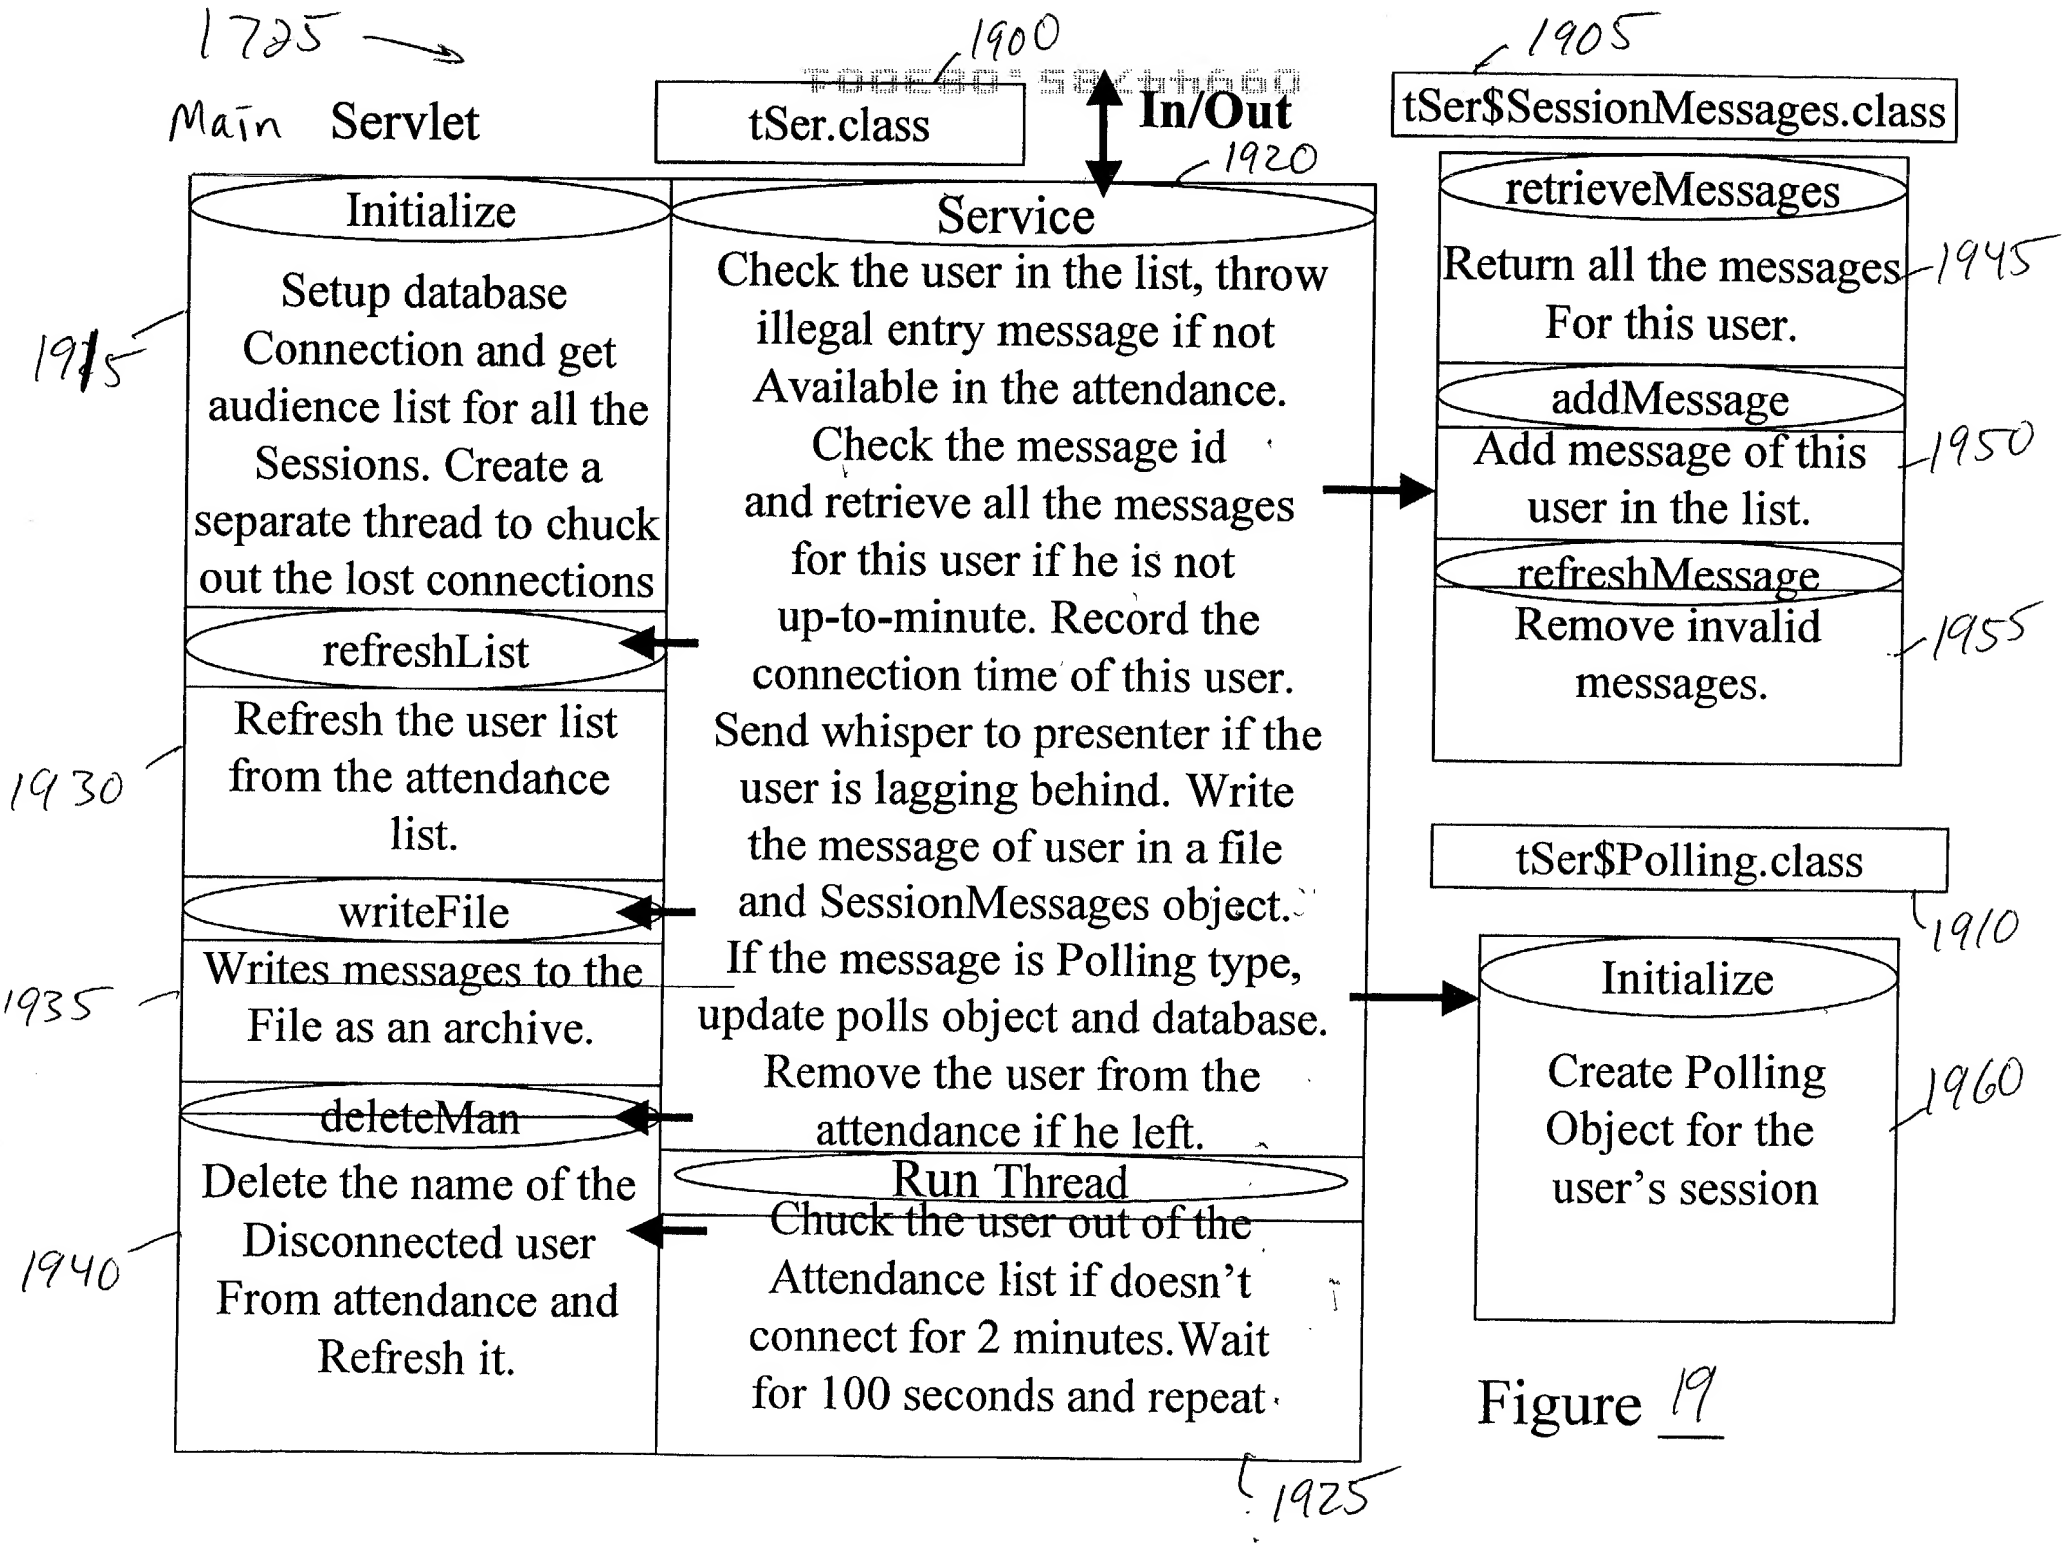
1715
1854
White_Board Applet
1850
1852
Drawing.class, Point.class and SessionArchive.class
White_Board.class
MyCanvas.class
1870
1856
init
Creating an instance of White Board, and get the Context of ConfApp3 and QueueApp applets
1862
MyCanvas
Set the Layout of White Board, it defines all kind of mouse and icon button events, rollover button events and also use for having an event to display the hand image on hand raised.
Point
Create an instance of Drawing Object
Drawings
Draw the annotations drawings on the drawing board.
1876
SessionArchive
Send the Archive to server for permanent storage and retrieve when required to display the archive of drawings, slides and slides with drawings
toStrimg
The overriden method used to return the string of each drawing user draw on drawing board
1858
getSlides
Connects to the Server and get slides in byte format and update the slide counter
1864
drawAll
Draw the object on the board by inspecting the drawing string received from the server by ConfApp3 applet
1868
actionPerfomed
Handles all the button events, creates instance of drawing object, sessionarchive if required, and sending drawing to server.
1860
paint
Draw the heading of sessions and also paint other messages on board when required
1866
createImage
Creating the Images from byte stream and display them on White Board
MouseHandler
Handles all the events occurred through mouse like button rollover images and mouse move events

Figure 18c



Breakout Applet
1720
1880
1882
BrekOut.cls
BreakOut$BreakFrame$DialogWin.class
Initialize
Create an instance of dialog window to manipulate break out Session info.
1884
1886
Initialize
Layout the dialog Window for break out Session manipulation
actionPerformed
Handle buttons and set the break out string variable accordingly.
1888
HandleTask
This is called when Ok button is pressed and the layout of the dialog window is updated accordingly. It may be closed.
1890
fillChoices
Called for laying out the lists of break-out sessions and their respective audience, for manipulation.
1892
itemStateChanged
Switch users from one session to an other. Call fillChoices.
1894

Figure 18d



1725
Main Servlet
1900
tSer.class
In/Out
1905
tSer$SessionMessages.class
1920
Initialize
Service
Setup database Connection and get audience list for all the Sessions. Create a separate thread to chuck out the lost connections
1915
Check the user in the list, throw illegal entry message if not Available in the attendance. Check the message id and retrieve all the messages for this user if he is not up-to-minute. Record the connection time of this user. Send whisper to presenter if the user is lagging behind. Write the message of user in a file and SessionMessages object. If the message is Polling type, update polls object and database. Remove the user from the attendance if he left.
retrieveMessages
Return all the messages For this user.
1945
addMessage
Add message of this user in the list.
1950
refreshMessage
Remove invalid messages.
1955
refreshList
Refresh the user list from the attendance list.
1930
writeFile
Writes messages to the File as an archive.
1935
deleteMan
Delete the name of the Disconnected user From attendance and Refresh it.
1940
Run Thread
Chuck the user out of the Attendance list if doesn't connect for 2 minutes. Wait for 100 seconds and repeat
1925
tSer$Polling.class
1910
Initialize
Create Polling Object for the user's session
1960
